A disposable container having an image capable of being personalized by a user by scratching and/or depressing at least a portion of the image is provided. A disposable container including a bottom portion, a sidewall portion extending up from the bottom portion to define a cavity capable of holding a substance and an upper portion of the sidewall to define an opening through which the substance can be placed within and withdrawn from the cavity, wherein the sidewall portion has an inner and an outer surface, and an image disposed on the outer surface of the sidewall portion, wherein the image can be scratched and/or depressed along any portion of the image by a user thereby personalizing said container, which fosters reuse and eliminates waste.
